Description	Free Sample order	Installation and Maintenance
-------------	-------------------	------------------------------

The Jegna Luxury Vinyl Rigid Core Smoked Oak Flooring is incredibly versatile for any setting. Its comfort underfoot makes it ideal for transforming both domestic and commercial spaces. Plus, the slip- and stain-resistant surface is remarkably easy to clean and maintain.

Selecting this flooring allows you to seamlessly integrate it into various design schemes. Whether placed in light or dark rooms, it will undoubtedly elevate the aesthetics of any space while also withstanding the demands of even the busiest households.

Experience the Jegna Smoked Oak, crafted from high-quality recycled polymers. This luxury vinyl flooring features a built-in underlay, eliminating the need for an additional purchase. The planks are meticulously designed to closely resemble natural wood flooring, showcasing both grain and appearance, with micro-bevelled edges that enhance their authentic look. Installation is a breeze thanks to the click-fitting system incorporated into the planks.

We recommend ordering a sample of the flooring before making your final decision. Images of the product can vary significantly depending on the device you're using, and a free sample is the best way to get an accurate idea of the colour, texture, and overall quality. This hands-on approach will allow you to see how it looks in your space and feel the material, ensuring that it meets your expectations.

The product comes with a built-in underlay, so no need to use any other type of underlay. It should be installed on a straight, rigid, and level subfloor. We suggest utilizing a self-levelling compound to achieve the necessary evenness. When installing over screed, ensure that the moisture content does not exceed 2%.

Installing this product on an uneven subfloor or using an inappropriate underlay can lead to the failure of the click system and cause damage to the flooring over time. Additionally, you must create an expansion gap around the perimeter and barrier every 30 m<sup>2</sup> or anywhere it meets another floor or vertical surface. We highly recommend installing our flooring only after carefully reviewing and following our installation and maintenance guide.
